**Subject:** Questions

Original Application

Form 2C of the EPA application under Section B.1. Outfalls 401 and 501 flow has 11,000. Is that for 401 and 501 combined or is each plant 11,000? I took it to mean that 401 and 501 were both 11,000 average flow, but Michelle thinks that maybe they are a combined flow. The flow balance diagram does make it look like they are a combined 11,000 flow, but with separate sewage treatment plants. Can you please clarify.
